Королёв, Владимир Иванович.

К68 30 000 примеров по математике. 3 класс / В. И. Королёв. — Москва : Эксмо, 2023. — 128 с. — (30 000 заданий для начальной школы).

ISBN 978-5-04-171262-4

Главная задача тренажёра — развитие у третьеклассника умения считать быстро и без ошибок. Для доведения навыков счёта до автоматизма и надёжного их закрепления ему предлагается решать примеры на скорость. Степень усвоения материала оценивается по времени, затрачиваемому на решение, и количеству ошибок. Все задания сгруппированы в стандартные блоки. В каждом из них ученику нужно выполнить короткую, среднюю и длинную серию примеров, выстроенных в столбики различной длины. По аналогии со спортом они носят названия «Спринт», «Средняя дистанция» и «Марафон». Перед началом решения каждого столбика нужно засечь время, а по окончании — записать, сколько прошло времени. После этого проверяются ответы. Если были допущены ошибки, их количество также записывается. Постепенно по мере уменьшения затраченного времени количество ошибок будет стремиться к нулю. Пособие предназначено для занятий как дома, так и в школе в качестве дополнительного материала.
